Product Modification Update

RE: Upgrade of 3120 type circuit protectors to LED illumination only

As part of E-T-A's philosophy of continuous improvement, we will replace the "filament" illumination on certain 3120 circuit breaker switches with LED's. LED's offer significant advantages over filament illumination such as; long life expectancy, reliability, consistent illumination pattern, and energy efficiency. In addition to the illumination change, the rocker switch has been modified slightly with the elimination of the prisms on the lower half of the rocker. These changes will be incorporated May 1, 2009.

While this upgrade does result in a change in the part number, E-T-A will however continue to supply product under the customer's existing part numbers until January 1, 2010 or until the customer begins ordering under the new part number—whichever occurs first.

If you have any questions regarding this change, please contact E-T-A Technical Support at 847-827-7600 ext. 191.
